

UX Report — Tick & Taka (round 2)

Android app for one person's day and money · re-audit after 75 fix commits

Project	Tick & Taka (monorepo: apps/mobile , apps/api , packages/shared)
Date	2026-10-06
Commit	df29d67 (branch fix/audit-2026-10-06)
Previous audit	Round 1 at 3b5438b , UX score 64/100, 30 findings (docs/audit/2026-10-06/UX_Report.html)
Auditor role	UX Lead
Yardstick	PRODUCT.md , DESIGN.md (colour table now with AA -text tokens), tick_taka_spec.pdf (text in _raw/spec.txt)
Mode	Read-only static review of the code. The app was not run: the only emulator has no Google Play services and sign-in is Google-only. Screenshots in docs/screenshots predate every fix.

1. Executive summary

83 /100

Round 1: 64/100. Round-1 findings: **25 Fixed, 4 Partially fixed, 1 Not fixed, 0 Regressed.**
Open findings now: 0 Critical, 1 High, 5 Medium, 10 Low.

The fix round dealt with the round-1 report properly. Every in-app text colour now passes WCAG AA in both themes and both accent themes, and a unit test (`apps/mobile/test/contrast.test.ts`) guards this. My script reproduces every ratio DESIGN.md quotes, and the code's tokens match the DESIGN.md table exactly. Sign-out asks first and counts unsynced changes. A 401 now keeps the outbox and shows a clear "Sign in again" prompt. Expenses read "-₹120". TalkBack gets the full safe-to-spend sentence and the swipe actions. Today leads with "Next: ..." and the safe-to-spend card. Quick-add, bulk moves and habit resets all show what happened and offer Undo.

What is left is narrower. The home-screen widget was missed by the token work: in light mode its labels are 2.8 to 4.5:1, its text is 10 to 12 px, and its buttons are 36 dp. Two one-tap money writes (Today's "Paid"/"Received" and the widget's quick-log chips) have no Undo. The 8-second Undo snackbar ignores Android's accessibility timeout. Purple still marks debts, goals, evenings and settings rows. Deleting the account takes one native alert at the top of Settings.

Severity	Critical	High	Medium	Low	Total
Open findings (round 2)	0	1	5	10	16
Round 1, for comparison	1	6	16	7	30

Top 5 to fix first

- High UX-031** The widget keeps the old palette and small sizes: " - Expense" at 2.84:1, muted labels at 3.96 to 4.47:1, 10 to 12 px text, 36 dp buttons and ~28 dp quick-log chips (`features/widget/safe-to-spend-widget.tsx:8-25, 82-103, 255-270`).
- Medium UX-033** "Paid"/"Received" on Today and the widget's quick-log chips write money in one tap with no Undo (`features/today/next-up.tsx:31-49, features/widget/widget-task-handler.tsx:17-51`).
- Medium UX-032** The Undo snackbar disappears after a fixed 8 s, ignoring the TalkBack user's "time to take action" setting (`components/ui/snackbar.tsx:9-25`).
- Medium UX-034** "Delete account" is one native alert away and sits at the top of Settings next to Sign out (`features/settings/account-section.tsx:31-41, 67-75`).
- Medium UX-007** (carried over) Purple and mango still mark debts, goals, evenings, someday, AI and settings rows, so purple doesn't only mean habits.

How the score is built: see "Score breakdown" at the end of section 2.

2. Scope and method

What was reviewed

- **Intent:** `PRODUCT.md` (users, 5 principles, accessibility commitments), `DESIGN.md` (tokens incl. the new `-text`, `line-strong` and `mango-inverse` rows, type scale, components), the spec text (`_raw/spec.txt`: app structure, Today order, quick-add).
- **Round 1:** all 30 findings in `docs/audit/2026-10-06/UX_Report.html`, each checked against the current code (section 3).
- **Code (apps/mobile/src, 20,439 lines):** read in full: `theme/palette.ts`, `theme/colors.ts`, `global.css`, `tailwind.config.js`, every file in `components/ui` and `components/navigation`, the Today route and all of `features/today`, quick-add (sheet, hook, requests), task row/sheet/more-fields/actions, habit chips/tap/list/sheet, transaction row/amount/sheet/list, money calendar, budgets, bills, money home, assistant (sheet, bubble, draft card, money drafts, chat store, hook), settings (screen, account, confirm-sign-out, data, appearance, themed root, reward theme), login, auth, session, error copy, notify, outbox, focus screen and announcement, running-timer bar, shutdown flow, weekly review, review home, plan compact task, calendar view, week planner, area sheet/colours, routine runner, widget and widget task handler, error screen.
- **Tests read for intent:** `test/contrast.test.ts` (and the names of the 31 test files in `apps/mobile/test`).

Scripted checks (scratch in `_ux_tmp/`, deleted afterwards)

- **Contrast:** a Python script parsed `palette.ts`, `global.css`, the `DESIGN.md` colour table and the widget's own palette, then computed WCAG 2.x ratios for every text, mark, fill, tint, boundary and accent-theme pair (Appendix A). It also diffed `DESIGN.md` against both code sources: **0 mismatches** in 68 comparisons (17 tokens × 2 schemes × 2 sources), and all 40 ratios quoted in `DESIGN.md` reproduce to two decimals.
- **Pressable scan:** parsed every `<Pressable>` and `<SwipeRowPressable>` opening tag (70 in 40+ files) for role, label, size classes and `hitSlop` (Appendix B).
- **grep counts:** accessibility props, `maxFontSizeMultiplier`, `useReducedMotion`, off-scale font sizes, hard-coded hex, guilt words, colour-token use per feature, `git log` / `git blame` on the widget, `DESIGN.md` and screenshots.
- **Reused, not re-run:** lint, typecheck and tests from `_raw/` (all pass: mobile 165 tests, 0 fail).

What could not be verified

No device or emulator run. Marked **Unverified**: what TalkBack actually reads (actions menu on the claimed row Pressable, the nested task checkbox, live-region chatter from the quick-add preview), layout at 200% font size, whether the keyboard padding in `Screen` keeps fields visible with edge-to-edge, real fold positions on Today, whether snackbars raised while a `formSheet` or `fullScreenModal` is open draw above it, widget rendering, and Reanimated layout animations under reduce-motion.

Screenshots (`docs/screenshots/*.png`, last commit `1f25750` on 2026-10-05) predate all 75 fix commits. Only `widget.png` is embedded, because the widget code has changed in one way since then (Focus is now blue instead of purple). That is noted under the image.

Score breakdown

Area	Weight	Round 1	Round 2	Points	Main reason for the change
Fit to the 5 principles + accessibility commitments (avg 4.0/5)	25	64%	80%	20.0	Today first and AA fixed; colour meaning only partly fixed
Core task flows (taps, friction, undo)	20	80%	90%	18.0	Undo on quick-add, bulk moves, habit reset; two money writes still without Undo
Nielsen heuristics (avg 4.2/5)	15	72%	84%	12.6	Status, recovery and error copy improved
Visual design and token consistency	10	60%	75%	7.5	Two-tier tokens, tested; colour drift and chip rows remain in secondary screens; widget palette separate
Accessibility (contrast, SR, scaling, motion)	15	40%	80%	12.0	In-app AA, roles, actions, scaling plan; widget, snackbar timeout, 1.4.11 marks
Mobile ergonomics (targets, reach, keyboard)	5	70%	85%	4.25	48 dp nearly everywhere, keyboard padding in Screen; FAB still off-centre
Content, microcopy, feedback and delight	10	85%	90%	9.0	One error-copy module; a few "server" and "Overdue" strings remain
Total	100	64	—	83.35 → 83	No Critical, so no deduction this round

Confidence: the score is based on the code. Several improvements (TalkBack actions, keyboard padding, 200% font size, above-the-fold position) are **Unverified** on a device. If device testing contradicts them, the accessibility and ergonomics rows would drop.

3. Round-1 findings status

Each round-1 finding was checked against the code at `df29d67`. "Fixed" means the problem described in round 1 is gone in the code. Device behaviour is still **Unverified** where noted. Paths are relative to `apps/mobile/src/`.

ID · R1 sev.	Round-1 finding	Status	Evidence now
UX-001 Critical	Sign out silently discards unsynced offline changes	Fixed	<code>features/settings/confirm-sign-out.ts:88-110</code> always asks; with pending writes it says how many and offers "Try syncing". A 401 now calls <code>expireSession()</code> , which keeps profile and outbox (<code>lib/auth.ts:134-146</code>); login asks the same account to sign in again. Account card still first on Settings (see UX-034).
UX-002 High	Light-mode semantic colours and muted text fail AA	Fixed	Two-tier tokens: Text tones map to <code>*-text</code> (<code>components/ui/text.tsx:17-32</code>). Light muted <code>#6B655F = 5.45/5.75</code> ; sky/mint/coral/grape/mango-text 5.55 to 6.07. Enforced by <code>test/contrast.test.ts</code> . Hero is mint-text 5.85:1.
UX-003 High	Dark-mode snackbar Undo is 1.41:1	Fixed	Action uses <code>mangoOnInk</code> → <code>mango-inverse</code> (<code>#8A5A00</code> in dark): 5.25:1 on cream, 9.10:1 in light (<code>snackbar.tsx:52</code>).
UX-004 High	White text on sky and coral fills fails AA	Fixed	<code>onAccent</code> (<code>#23202B</code>) on every fill: sky 5.06/6.43, coral 6.28/7.44 (<code>swipe-row.tsx:45-51</code> , <code>message-bubble.tsx:248-252</code>). Time button is now outlined with a sky icon (<code>button.tsx:11-12</code>); timer bar is a card with a sky mark.
UX-005 High	Expense amounts have no sign	Fixed	<code>features/money/transaction-amount.ts</code> returns negative minor for money out (" <code>-₮120</code> "), "+" for money in, a transfer icon for transfers; covered by <code>transaction-amount.test.ts</code> .
UX-006 High	TalkBack never reads the safe-to-spend amount	Fixed	<code>safeToSpendLabel()</code> builds "Safe to spend today, ₮434. ₮120 spent of ₮554. 12 days left." with privacy and pace alert (<code>features/today/safe-to-spend-label.ts</code> , tested). Unverified on device.
UX-007 High	Colour meaning has drifted from DESIGN.md	Partially fixed	Fixed: Focus/timer/planner cards sky, unscheduled neutral, habit rings always grape, no mango budget bar, calendar uses a small coral bar. Still drifting: grape on debts, goals, someday, evening, AI and settings rows; mango icons; coral for deadlines. Carried as UX-007 (Medium).
UX-008 Medium	Pressables without role; form labels not linked	Fixed	Only 4 of 70 pressables lack a role, deliberately (<code>accessible={false}</code> rows whose Checkbox is the control). TextField links label with <code>nativeID/ accessibilityLabelledBy</code> and errors have a live region (<code>text-field.tsx:24-60</code>).

ID · R1 sev.	Round-1 finding	Status	Evidence now
UX-009 Medium	Swipe and drag actions out of reach for TalkBack	Fixed	<code>useSwipeRowA11y</code> moves the actions onto the row's focusable Pressable, right swipe included (<code>swipe-row.tsx:63-78</code> , <code>221-225</code>); planner cards expose "Schedule for..." actions (<code>compact-task.tsx:31-34</code>). Unverified on device.
UX-010 Medium	Ten touch targets below 48 dp	Fixed	All ten sites are now <code>h-12 / min-h-12</code> or have slop (Appendix B). New, smaller cases listed in UX-040 and UX-031.
UX-011 Medium	Tab bar and FAB differ from the spec	Partially fixed	FAB 48 → 56 dp, icons 26, labels 12 with a 1.3× cap. Off-centre FAB kept and DESIGN.md amended to describe it (<code>8bb6918</code>). Carried as UX-011 (Low).
UX-012 Medium	Today's "what now?" below the fold	Fixed	Compact header with "Next: ..." line, then safe-to-spend and Top three; shortcut tiles moved to the end (<code>app/(tabs)/index.tsx:55-72</code> , <code>today-header.tsx</code>). Fold position Unverified .
UX-013 Medium	Edit sheets and filters are rows of chips	Partially fixed	Task sheet: When ▼, Estimate ▼, "More options"; quick-add and transaction sheet use PickerField; filters are "Type: All ▼"; Settings is a menu. Habit, account, goal, event, recurring, time-entry sheets and planning/notification pages still use chip rows. Carried as UX-013 (Medium).
UX-014 Medium	Shutdown checkboxes don't respond	Fixed	Optimistic cache patches (<code>shutdown-cache.ts</code> , tested), whole-row targets, ticked habits move to "Done", "3 of 3 picked" caption (<code>shutdown-flow.tsx:53-84</code> , <code>181-185</code>).
UX-015 Medium	Quick-add "Saved" has no detail and no Undo	Fixed	"Saved: <preview>" with Undo that DELETes the client-made id (<code>quick-add-sheet.tsx:93-105</code> , <code>quick-add-requests.ts:176-186</code>).
UX-016 Medium	Bulk Move / Today act without preview or Undo	Fixed	Server returns <code>before</code> ; snackbar names up to two tasks and offers Undo that restores each state (<code>later-today.tsx:35-55</code> , <code>bulk-move.ts</code> , tested). Offline it says when it will move.
UX-017 Medium	Habit ring resets on one extra tap	Fixed	At target a tap changes nothing and offers "Take one back"; long-press reset has Undo; actions menu has both (<code>habit-chips.tsx:140-159</code> , <code>habit-tap.ts</code> , tested).
UX-018 Medium	Developer error copy reaches the user	Fixed	All API errors go through <code>lib/error-copy.ts</code> (tested); dev host shown only in <code>__DEV__</code> (<code>login.tsx:151-159</code>); ErrorState copy no longer mentions a server. Two leftovers in sign-in/delete paths: UX-038 (Low).
UX-019 Medium	Focus timer announces every second	Fixed	Live region removed; <code>focusAnnouncement()</code> speaks at phase changes, each 5-minute mark and the last minute (<code>focus-screen.tsx:133-142</code> , tested).
UX-020 Medium	No plan for large font sizes	Fixed	Hero, tab labels, keypad, calendar numbers, focus clock and emoji circles capped at 1.3×; min-height containers; hero and tab labels shrink to fit. Unverified at 200%.

ID · R1 sev.	Round-1 finding	Status	Evidence now
UX-021 Medium	No Bangla digits, no lakh grouping	Fixed	<code>toAsciiDigits</code> in every parser; lakh grouping default for BDT; optional Bangla display (<code>packages/shared/src/money.ts:44-97</code>). Gaps in keypad/widget: UX-041.
UX-022 Low	Accent themes don't reach <code>useColors()</code>	Fixed	<code>useColors()</code> returns <code>themedPalette(scheme, rewardTheme)</code> (<code>theme/colors.ts:15-18</code>); tested.
UX-023 Medium	Running-timer bar covers the end of Today	Fixed	<code>extraBottom={RUNNING_TIMER_SPACE}</code> (72) when a timer runs (<code>app/(tabs)/index.tsx:53</code>); end padding <code>inset+192</code> vs bar top <code>inset+140</code> .
UX-024 Medium	In-screen inputs lack keyboard avoidance	Fixed	Screen pads by <code>useKeyboardHeight()</code> in both scroll and fixed modes (<code>screen.tsx:39-41, 86, 95</code>). Unverified with edge-to-edge.
UX-025 Low	Text sizes outside the type scale (9, 11 px)	Fixed	9 px and 11 px gone; only the 12 px tab label remains, now allowed by DESIGN.md. Money calendar shows the selected day's spend at callout size. Widget still uses 10-12 px (UX-031).
UX-026 Low	Leftover guilt UI: zero streaks, over-plan bars, plant	Partially fixed	<code>gentle-progress.ts</code> used on review home, habit list and weekly hours; plant line rewritten. Weekly review habit/wins steps still print zeros. Carried as UX-026 (Low).
UX-027 Low	Money calendar large coral fills	Fixed	Neutral cells with a small coral bar scaled by spend (<code>money-calendar.tsx:264-281</code>). Bar contrast: UX-035.
UX-028 Low	Area colours announced as hex codes	Fixed	Named swatches drawn through theme tokens, announced "Blue", "Purple"... (<code>features/plan/area-colors.ts</code> , tested). Role/state detail: UX-036.
UX-029 Low	README screenshots behind the code	Not fixed	<code>docs/screenshots</code> last changed in 1f25750 (2026-10-05), before all 75 fix commits. Carried as UX-029 (Low).
UX-030 Low	Input and secondary-button borders 1.25:1	Fixed	<code>line-strong</code> on inputs, <code>PickerField</code> , secondary buttons and switch tracks: 3.48/3.67 light, 4.06/3.59 dark.

Tally: 25 Fixed · 4 Partially fixed (UX-007, UX-011, UX-013, UX-026) · 1 Not fixed (UX-029) · 0 Regressed. The four partial items and the unfixed one continue as findings in section 7 under their original IDs.

4. Fit to product principles

Principle (PRODUCT.md)	R1	R2	Evidence
1. Today first, one glance	3	5	The header is one line of date and goal, a 52 dp Tiki with a one-line greeting, then "Next: <i>task</i> · 8:00 pm" (<i>features/today/today-header.tsx:33-73</i> , chosen by the tested <i>next-thing.ts</i>). Safe-to-spend and Top three follow, and the shortcut tiles have moved to the end (<i>app/(tabs)/index.tsx:66-72</i>). This matches the spec order. Fold position Unverified ; by layout arithmetic, Top three starts at about 460 dp.
2. Capture beats organise	4	4	Quick-add is still one field and Save. The chip row is now "Kind ▼" plus "When ▼" or "Account ▼ / Category ▼" (<i>features/quick-add/quick-add-sheet.tsx:159-201</i>). After saving, the snackbar says "Saved: Expense ₮250 · Food · Cash" with Undo (:98-103). These pickers show on every input, not "only when the parser needs help", but they are compact and say "Auto · Expense".
3. Big, calm, thumb-sized	3	4	Every round-1 small target is now ≥ 48 dp (Appendix B). FAB 56 dp, icons 26, labels 12. Open: the widget's 36 dp buttons and ~28 dp chips (UX-031), the week-planner day header (~24 dp), calendar cells ~43 dp wide on a 360 dp phone (UX-040), and the FAB off-centre when chat is on (UX-011).
4. Colour means something	2	3	Focus, timers and planner cards are sky. Unscheduled cards are neutral. Habit rings are always grape. Budgets "running ahead" is coral text. Expenses carry "-". Still drifting: grape on debts, goals, someday, evening, weekly recap, AI and Appearance rows; mango icons on Streaks, Weekly review, Notifications and Areas; coral for deadlines and high priority (UX-007).
5. Reward, never guilt	4	4	Zero streaks now say "start one today" (<i>lib/gentle-progress.ts:10-12</i>). Weekly habit dots count days done, and over-plan time shows as a lighter "+10h". The plant line is now "Back with it...". Left over: the weekly review still shows "🔥 0 days · best 0" (UX-026), and bills say "Overdue" next to a coral icon (UX-037).
Accessibility & Inclusion commitments	2	4	All in-app text pairs pass AA in light, dark and both accent themes, and a test enforces it. Dark text sits on every fill. Snackbar Undo is 9.10 / 5.25. Amounts are signed. Roles and labels are on every control. Swipe and drag actions are in the actions menu, and the focus timer speaks only at milestones. Not met: the widget in light mode (UX-031), the snackbar time limit (UX-032), and a few non-text marks below 3:1 (UX-035).

Average of the six rows: 4.0 / 5 (round 1: 3.2).

5. Core task flows

Taps are counted from Today, already open. "Type" means one text entry. The target is "log in under five seconds". Times are **Unverified**.

Flow	Steps	Taps	Friction, dead ends, undo (round 2)
Log an expense	+ (FAB) → "cha 20" → Save	2 + type	Meets the target. The snackbar names what was saved and offers Undo, which deletes by the id made on the phone, so it works offline too. Bangla digits ("৳ ২০") parse on the phone.
Log income	+ → "+45000 salary" → Save	2 + type	Same as above. Shows "+৳45,000" and groups in lakh by default.
Add a task	+ → "call bank tomorrow 5pm" → Save	2 + type	Good. "When ▼" overrides the parsed day.
Log time	+ → "2h thesis" → Save	2 + type	Good. The Area picker shows for time entries.
Check safe-to-spend	Open the app	0	Above the fold. Mint-text hero is 5.85:1. TalkBack reads "Safe to spend today, ৳434. ৳120 spent of ৳554. 12 days left." (safe-to-spend-label.ts , tested). The widget's light-mode text fails AA (UX-031).
"What now?"	Read the header	0	"Next: Standup call 8:00 pm". One tap opens the task.
Complete a task	Tap checkbox or swipe right	1	Pop, haptic, chime, "Done: "..."" with Undo. In TalkBack, "Complete" is in the actions menu Unverified .
Check off a habit	Tap ring	1 per count	At target, a tap changes nothing and offers "Take one back". Long-press resets, with Undo. Fixed.
Start focus	Scroll to the shortcuts → Focus → Start focus	2 + scroll	The trade-off of moving shortcuts below the fold: Focus now needs a scroll from the top of Today, or the widget / launcher shortcut. Start focus is an outlined button with a sky icon.
Daily shutdown	Review → Shutdown → tick rows → Done	4+	Ticks show at once and offline. Whole rows are targets, ticked habits move to "Done", and "3 of 3 picked. Untick one to swap it." replaces the toast. Fixed.
Delete a transaction	Swipe left → Delete (or actions menu)	2	Undo for 8 s. Readable in both themes. Not adjustable for screen-reader users (UX-032).
Bring old tasks into today	Later → "Today"	1	"Moved "Call bank", "Read" and 2 more to today" with Undo that restores each task's earlier state. Offline it says when it will happen. Fixed.
Pay a bill from Today	Next up → "Paid"	1	Logs a transaction and moves the due date at once. "Rent logged" has no Undo (UX-033).
Quick-log from the widget	Tap "Cha ৳20" chip	1	An expense is posted straight away from a ~28 dp chip. The only feedback is an 11 px status line, and there is no Undo (UX-031, UX-033).

Flow	Steps	Taps	Friction, dead ends, undo (round 2)
Accept an AI money change	Chat → ask → Save on the draft card	2 + type	Nothing is written until Save. The card shows a signed amount, account, category and date. After saving, the row in the action list has Undo. Discard says "Nothing was saved". Clearing the chat drops pending drafts without asking (UX-039).
Sign out	Review → Settings → Sign out → confirm	4	"Sign out with unsynced changes? 3 changes haven't reached the server yet..." with Try syncing / Sign out anyway. Fixed.
Session expired	(automatic) → Continue with Google	1	Login says "Your session ended. Sign in as you@... to carry on and send the 3 changes waiting on this phone", and warns that another account wipes the phone. The outbox is kept. Well done.
Delete the account	Review → Settings → Delete account → confirm	4	One native alert. It suggests exporting first, but export is on another page (UX-034).

6. Heuristic review (Nielsen's 10)

Heuristic	R1	R2	Evidence
1. Visibility of system status	4	5	The offline pill counts changes, shutdown ticks show at once, quick-add names what it saved, drafts say "not saved yet", a stale-day line appears after midnight (<code>app/(tabs)/index.tsx:60-65</code>), and a reminder banner shows when notifications are off.
2. Match with the real world	4	4	Lakh grouping, Bangla digits in input and as a display option. Remaining: "server" in user copy and "Overdue" on bills (UX-037, UX-038), and the keypad stays 0-9 under Bangla numbers (UX-041).
3. User control and freedom	3	4	Undo for quick-add, bulk moves, habit reset, complete, snooze, delete and AI changes. Missing for bill Paid/Received, widget quick-log, drag-to-reschedule and "New chat".
4. Consistency and standards	3	4	The shared PickerField is used in the task, quick-add and transaction sheets and in filters. Chip rows remain in eight other sheets and pages (UX-013), and colour drift remains (UX-007).
5. Error prevention	3	4	Sign-out guard, AI money drafts, AI delete confirmation, habit over-tap guard. Deleting the account takes one alert.
6. Recognition rather than recall	4	4	Labelled tabs and pickers. "More options" summarises what is set behind it (<code>task-sheet.tsx:181-189</code>).
7. Flexibility and efficiency	5	5	Natural-language capture, AI fallback, widget, launcher shortcuts, swipe gestures, voice chat.
8. Aesthetic and minimalist design	3	4	The task sheet shows title, notes, When, Estimate and "More options". Settings is a short menu. The habit, account, goal and planning screens are still chip rows.

Heuristic	R1	R2	Evidence
9. Help users recover from errors	3	4	<code>lib/error-copy.ts</code> turns every API error into calm copy ("Saved on this phone. It'll sync when you're back online."). The dev host shows only in <code>__DEV__</code> . Login can still show "Couldn't reach the server" or a raw server message (UX-038).
10. Help and documentation	4	4	Placeholders, empty states with one action, chat starter prompts. The Numbers setting gives a live example ("like ၆၃,၃၆၀").

Average 4.2 / 5 (round 1: 3.6).

7. Findings

Open findings at [df29d67](#). New ones are numbered from UX-031. Round-1 findings that are only partly fixed keep their original IDs, marked "carried". Paths are relative to `apps/mobile/src/`. Sorted by severity within each group.

7.1 Accessibility

UX-031 · The home-screen widget missed the AA and 48 dp work

High Accessibility / contrast, touch targets · New

Where `features/widget/safe-to-spend-widget.tsx:8-25` (own hex palette), `:82-103` (action pills), `:185-212, 228-247` (10-11 px labels), `:255-270` (quick-log chips), `:190, 206, 266` (amounts); `features/widget/widget-task-handler.tsx:31-42`

What's wrong The app's tokens moved to an AA "-text" tier, but the widget keeps its own palette, which last changed in `604add0` (Focus colour only). In light mode: " - Expense" is coral `#E8604F` on `#FFE6E2` at **2.84:1**; " + Task" and "► Focus" are 3.86:1; muted labels ("Safe to spend today", "Next up", "₹270 of ₹787 spent") are `#7D7670` at 3.96 to 4.47:1 and 10-11 px; the hero amount is 2.97 to 3.18:1 across the background gradient. The action pills are 36 dp tall and the quick-log chips about 28 dp, yet one tap on a chip posts a real expense. Amounts use the shared `formatAmount` without the Numbers setting, so Bangla digits never reach the widget. Dark mode passes.

Evidence

```
light: { from: "#FFF8EE", to: "#FFEFD9", card: "#FFFFFF",
  muted: "#7D7670", mint: "#1E9E80", coral: "#E8604F", sky: "#3F6FE0",
  ...
function Action(...) { ... style={{ flex: 1, height: 36, borderRadius:
18, ...
  <TextWidget ... style={{ fontSize: 12, fontWeight: "bold", color: tone
}} />
<TextWidget text={over ? "Over today's amount by" : "Safe to spend
today"}
  style={{ fontSize: 11, color: c.muted }} />
paddingHorizontal: 10, paddingVertical: 6 ... fontSize: 12 // quick-log
chip
```

widget.png, from before the fixes (2026-10-05). It still shows the current widget, except Focus is now blue instead of purple. Note the coral "Expense" label on its pink pill, the small grey labels and the chip-sized quick-log buttons.

Why it matters The widget is the fastest way to answer "can I afford it?" and to log "Cha ₹20" at a shop counter in daylight, which is the main scene in `PRODUCT.md`. It breaks two stated commitments: AA in both themes, and targets ≥ 48 dp.

Recommendation Build the widget palette from `theme/palette.ts` (`mintText`, `coralText`, `skyText`, `muted`) and add it to `contrast.test.ts`, including text on the tints. Use 13 px minimum, 48 dp action pills and chips (the 170 dp "tall" breakpoint already exists), and pass `numerals` through the widget cache. After a quick-log, show "Logged Cha ₹20 · Undo" as a tappable status that deletes the record.

UX-032 · The Undo snackbar has a fixed 8-second limit**Medium** Accessibility / timing (WCAG 2.2.1) · New**Where** `components/ui/snackbar.tsx:9-25` (timers), `:33` (position), `:35-55`

What's wrong The snackbar closes after 5 s, or 8 s with an action, whatever the user's setting. Android has an accessibility "Time to take action" setting, which RN exposes as `AccessibilityInfo.getRecommendedTimeoutMillis()`. There are 0 uses of it in the repo. The live region reads only the message ("Deleted "Rent""), so a TalkBack user doesn't hear that an Undo exists and must swipe to it before it goes. The bar also sits at `insets.bottom + 92`, which overlaps the running-timer bar (`inset + 84` to `inset + 140`) and hides its Stop button while shown **Unverified**.

Evidence

```
const VISIBLE_MS = 5000;
/** An Undo needs time to notice and reach for. */
const WITH_ACTION_MS = 8000;
...
snack.onAction ? WITH_ACTION_MS : VISIBLE_MS,
```

Why it matters Undo replaces "Are you sure?" for every delete, completion, snooze, bulk move and quick-add. For a screen-reader user, an Undo that times out means there is no safeguard.

Recommendation `await AccessibilityInfo.getRecommendedTimeoutMillis(WITH_ACTION_MS)`, and while a screen reader is on, keep the snackbar until dismissed or until the next one replaces it. Put the action in the spoken text: "Deleted "Rent". Undo available." When a timer is running, lift the snackbar above `RUNNING_TIMER_SPACE`.

Effort S**UX-035 · Some non-text marks are below 3:1 in light mode****Low** Accessibility / non-text contrast (WCAG 1.4.11) · New

Where `components/ui/checkbox.tsx:19-24` with `features/money/shopping-screen.tsx:148-150` (mint ring); `features/money/money-calendar.tsx:276-280` (coral spend bar); sky marks drawn on the background

What's wrong The bright mark tokens are fine as fills under dark text, but some are the only visual cue for a control or a value. An unchecked shopping checkbox is a mint ring on white at **2.21:1**. The money calendar's per-day spend bar is coral on white at **2.55:1**, and it is the only visual cue to a day's spending (the figure shows only for the selected day). Sky on the cream background is 2.999:1, which rounds to 3.00 but fails. Grape rings pass on cards (3.05) but not on the background (2.90).

Recommendation Draw unchecked checkbox rings in `line-strong` (3.67:1), or use the `-text` tier for ring strokes, and keep the bright token for the filled state. Use `coral-text` for the calendar bar. Add a "marks on surfaces $\geq 3:1$ " case to `contrast.test.ts` for the tokens used as the only cue.

Effort S

UX-036 · Single-choice controls announce the wrong role or state

Low Accessibility / screen reader · New **Unverified**

Where	<code>components/ui/segmented.tsx:19-20</code> ; <code>features/plan/area-sheet.tsx:120-121</code> ; <code>components/ui/chip.tsx:18-19</code> ; <code>components/ui/picker-field.tsx:117-120</code>
What's wrong	Segmented uses <code>accessibilityRole="tab"</code> for Light/Dark, Numbers, Priority and Expense/Income/Transfer, but nothing around it is a tab list, so TalkBack says "tab, 1 of 1". The area colour swatches are <code>radio</code> but set <code>selected</code> rather than <code>checked</code> , so "checked" is never read. Chip groups (habit emoji, reminder times, accent) and picker options are "button" with <code>selected</code> .
Recommendation	Use <code>radiogroup</code> on the container and <code>radio</code> with <code>checked</code> on each option in Segmented, single-choice chip rows and swatches. PickerField options can stay buttons with <code>selected</code> , but give the expanded list a header.
Effort	S

7.2 User control and data safety

UX-033 · Some one-tap money writes have no Undo

Medium User control / error recovery · New

Where	<code>features/today/next-up.tsx:31-49</code> ("Paid" / "Received"); <code>features/widget/widget-task-handler.tsx:17-51</code> (quick-log chip); also <code>features/plan/use-move-task.ts:22-50</code> (drag to another day or time)
What's wrong	On Today, "Paid" is a small secondary button inside the bill row. One tap posts a payment, which creates a transaction and moves the bill's next due date, then shows "Rent logged" with no action. The widget chip posts an expense in one tap and reports only "Logged Cha ₺20 ✓" in 11 px. Everywhere else the app follows its own rule, Undo instead of "Are you sure?". Rescheduling by drag in the planners has no Undo either (lower stakes).
Evidence	<pre>send({ method: "POST", path: `/recurring/\${item.id}/pay`, body: { transactionId: newId(), dueAt: item.at }, label: `Couldn't log \${item.name}` }); notify(`\${item.name} logged`); // no action</pre>
Why it matters	A mis-tap changes the money numbers (safe-to-spend, the bill's next date), and fixing it means finding the transaction and editing the bill by hand. That costs trust in "can I afford it?".
Recommendation	Offer Undo on both: <code>DELETE /transactions/{transactionId}</code> plus a "previous due date" restore (the pay endpoint can return the old <code>nextDueAt</code> , as the bulk moves now return <code>before</code>). Show the widget's status as "Logged Cha ₺20 · Undo" for a short window. For drag moves, show "Moved to Thu · Undo".
Effort	M

UX-034 · Deleting the account is one alert away, at the top of Settings

Medium Error prevention / information architecture · New

Where	<code>features/settings/account-section.tsx:21-41, 67-75</code> ; <code>features/settings/settings-screen.tsx:202</code> ; <code>lib/auth.ts:204-211</code>
-------	--

What's wrong

The account card is the first thing on the Settings screen, and "Delete account" is a ghost button right under "Sign out". Confirming takes one native alert (on Android, "Delete account" is a plain positive button, because `style: "destructive"` only affects iOS). The text says "Export your data first if you want a copy", but export is on a different page (Settings > Your data), so the user has to cancel, find it and come back. When the server refuses, `deleteAccount` throws a plain `Error`, which `friendlyError` turns into the generic "Something went wrong. Try again.", so the server's reason is lost. After a successful delete the app lands on login with no confirmation.

Evidence

```
Alert.alert("Delete your account?", `This permanently deletes ... It can't be undone.
Export your data first if you want a copy.` , [
  { text: "Cancel", style: "cancel" },
  { text: "Delete account", style: "destructive", onPress: () => void remove() },
]);
```

Why it matters

This is the only action in the app that cannot be undone and that also destroys the server copy and the backups. Round 1 already asked to move Account to the bottom of Settings.

Recommendation

Move Sign out and Delete account to the bottom of Settings, or put Delete on the "Your data" page under Export. Replace the alert with a sheet that has "Export first" as a button and a typed or held confirmation ("Type DELETE"). Map the error through `ApiError` so the copy can be specific. After success, show "Your account and data were deleted" on the login screen.

Effort

S

UX-039 · "New chat" deletes pending money drafts and Undo rows without asking

Low User control · New

Where

`features/assistant/assistant-sheet.tsx:64-73`; `features/assistant/chat-store.ts:90-92`

What's wrong

The broom icon calls `clearChat()` at once. Draft cards waiting for Save, and the Undo buttons on recent AI changes, go with it. There is no confirmation and no Undo.

Recommendation

If any draft is pending or any action is still undoable, ask: "2 changes are waiting for Save. Clear anyway?". Or offer "Chat cleared · Undo".

Effort

S

7.3 Visual design and colour meaning

UX-007 (carried) · Purple, mango and coral still mean several things

Medium Visual design / principle 4 · Round 1: High → partly fixed

Where	Grape: debts <code>features/today/next-up.tsx:108</code> , <code>features/money/debts-screen.tsx:144</code> , <code>features/money/money-home.tsx:188</code> , <code>features/money/debt-sheet.tsx:166</code> ; goals <code>money-home.tsx:110</code> ; evening and weekly recap <code>features/today/later-today.tsx:126</code> , <code>162</code> ; someday and routines <code>features/plan/plan-home.tsx:178</code> , <code>201</code> , <code>features/routines/routine-runner.tsx:204</code> , <code>216</code> ; Appearance and AI <code>features/settings/settings-screen.tsx:49</code> , <code>108</code> ; review list <code>features/review/review-home.tsx:136</code> ; weekly-review stepper <code>features/review/weekly-review.tsx:67</code> ; Eisenhower quadrants <code>features/plan/eisenhower-grid.tsx:37</code> , <code>45</code> . Mango icons: <code>review-home.tsx:96</code> , <code>121</code> , <code>settings-screen.tsx:76</code> , <code>90</code> . Coral for urgency: <code>features/tasks/task-row.tsx:75</code> , <code>87</code> .
What's wrong	The round-1 examples are fixed: Focus, timers and planner cards are sky, habit rings are always grape, and the budget bar is no longer mango. But purple is still used across money (debts, goals), planning (someday, routines, evening), the review stepper and two settings rows. Mango, "reserved for the one primary action", tints four list icons. Coral, "money out", also marks task deadlines and high priority.
Why it matters	DESIGN.md: "blue for time... purple for habits. Everything else stays neutral." Once purple is on Debts and Goals in the Money tab, it no longer tells you which half of the app you are in.
Recommendation	Make muted the default <code>iconColor</code> for menu and list rows. Keep colour for rows whose domain matches: sky for time, mint/coral for money in/out, grape for habits. Use ink plus a flag glyph for deadlines and priority. A small test can assert that <code>iconColor="grape"</code> appears only under <code>features/habits</code> and habit rows.
Effort	S

UX-013 (carried) · Chip rows remain in eight sheets and settings pages

Medium Visual design / minimalism (anti-reference) · Round 1: Medium → partly fixed

Where	<code>features/habits/habit-sheet.tsx:100-104</code> (10 emoji chips), <code>:113-123</code> , <code>:134-146</code> (6 reminder chips); <code>features/settings/planning-settings.tsx:21-91</code> (6 chip rows); <code>features/settings/notification-settings.tsx:22-43</code> (3 rows); <code>features/money/account-sheet.tsx:155-168</code> ; <code>features/money/recurring-sheet.tsx:216-248</code> ; <code>features/money/goal-sheet.tsx:96</code> ; <code>features/money/event-sheet.tsx:81</code> ; <code>features/time/time-entry-sheet.tsx:116</code>
What's wrong	The round-1 targets are done: the task sheet has When ▼ / Estimate ▼ and "More options", quick-add and the transaction sheet use pickers, transaction filters are "Type: All ▼", and Settings is a menu of pages. The same pattern hasn't reached the other sheets. "Today and planning" is six rows of chips (daily goal, days off, capacity, week start, focus length, break length).
Recommendation	Use <code>PickerField</code> for every single-choice list longer than three (reminder time, currency, account type, durations, week start). Keep emoji grids, but show them behind an "Emoji ▼" field that opens the grid. For the planning page, one row per setting with its current value, as on the Settings menu.
Effort	M

UX-011 (carried) · The FAB is off-centre whenever chat is available

Low Ergonomics · Round 1: Medium → partly fixed

Where `components/navigation/tab-bar.tsx:98-120`; DESIGN.md "Tab bar" (amended in 8bb6918)

What's wrong The FAB grew from 48 to 56 dp, icons are 26 and labels 12, all as asked. The off-centre position was not changed. Instead, DESIGN.md was rewritten to describe it ("the FAB is then centred in the capsule rather than on the screen"). With the 64 dp chat button on the left, the FAB sits about 36 dp right of the screen's centre, so the "one thumb-tap" capture button moves depending on whether AI is configured. The yardstick was changed to fit the code, so this is "partly fixed", not "fixed".

Recommendation Either accept it explicitly (it is now documented), or move the chat entry into the FAB's long-press / the Today header and centre the FAB on the screen.

Effort M

7.4 Content, microcopy and localisation

UX-026 (carried) · The weekly review still leads with zeros

Low Microcopy / principle 5 · Round 1: Low → partly fixed

Where `features/review/weekly-review.tsx:154-156, :165`

What's wrong Review home, habit list and weekly hours now use `gentle-progress.ts`. The weekly review's habit step does not. It prints `🔥 {streak} {unit}s · best {best}`, so a new habit reads "🔥 0 days · best 0", and one day reads "1 days". The wins step shows "★ 0 of 3 top-three tasks".

Recommendation Use `streakText` / `bestText` here as well, and hide the top-three line when nothing was done (or say "Top three: a fresh start next week").

Effort S

UX-037 · Bills say "Overdue" in coral, while tasks say "from earlier"

Low Microcopy / principle 5 · New

Where `features/today/next-up.tsx:24-28`; `features/money/bills-screen.tsx:18-20, 95-97`

What's wrong Overdue tasks are handled gently ("From earlier. Bring it into today?"). Bills on Today's "Next up" show the subtitle "Overdue" next to a coral receipt icon, and the Bills screen shows "Overdue" with a coral amount. PRODUCT.md lists "overdue alarms" as an anti-reference.

Recommendation "Was due Mon 5 Oct" or "Due since Monday", in muted text. Keep the coral mark small.

Effort S

UX-038 · A few strings still speak developer or skip plurals

Low Microcopy / error recovery · New

Where `lib/auth.ts:127` → `app/login.tsx:56-57`; `lib/auth.ts:209` → `features/settings/account-section.tsx:26`; `app/(tabs)/index.tsx:63`; `features/today/safe-to-spend-card.tsx:60`

What's wrong	When sign-in reaches the server but fails, login shows the server's raw <code>error.message</code> , or "Couldn't reach the server" even when the server did answer (for example with a 5xx). This happens because <code>signInWithGoogle</code> throws a plain <code>Error</code> , which bypasses <code>friendlyError</code> . The stale-day line says "today's numbers load once the server answers". The safe-to-spend card prints "1 days left" (its spoken label handles the singular). Sign-out and delete dialogs say "the server", which is acceptable there.
Recommendation	Throw <code>ApiError</code> from <code>signInWithGoogle</code> and <code>deleteAccount</code> so <code>error-copy.ts</code> handles them. Use "once you're back online" in the stale-day line. Use <code>plural(daysLeft, "day")</code> on the card.
Effort	S

UX-041 · "Bangla digits" reaches amounts on screen only

Low Localisation · New

Where	<code>components/ui/amount-keypad.tsx:50-53</code> ; <code>features/widget/safe-to-spend-widget.tsx:4, 190, 206, 266</code> ; <code>features/settings/appearance-settings.tsx:38-50</code>
What's wrong	The new Numbers setting works where <code>Amount</code> or <code>lib/format.formatAmount</code> is used, and it is labelled honestly ("How amounts are shown... You can type either"). But the transaction keypad shows the amount being typed as "৳1250", in 0-9, with 0-9 keys, right under a heading that shows "৳১,২৫০" elsewhere. The widget imports the shared <code>formatAmount</code> without <code>numerals</code> . Counts, dates and times stay 0-9, which is a defensible scope but isn't stated.
Recommendation	Render the keypad display and keys through the numerals store. Pass numerals into the widget cache. Optionally say "Amounts only; dates stay 0-9" in the caption.
Effort	S

7.5 Layout and ergonomics

UX-040 · A few targets and rows are still under spec

Low Mobile ergonomics · New

Where	<code>features/plan/week-planner.tsx:127-138</code> (day header Pressable, one text line, ~24 dp tall); <code>features/money/money-calendar.tsx:265</code> and <code>features/plan/calendar-view.tsx:136</code> (w-[14.28%] cells: ~43 dp wide on a 360 dp phone); <code>features/money/transaction-row.tsx:59</code> (<code>min-h-14</code> = 56 dp rows, DESIGN says 60)
What's wrong	Every round-1 site was fixed, but these were not on that list. The week-planner header opens the day and has no minimum height or <code>hitSlop</code> . On narrow phones the calendar cells fall just under 48 dp wide.
Recommendation	<code>min-h-12</code> on the week-planner header. <code>hitSlop={{ left: 3, right: 3 }}</code> on calendar cells, or let the grid use the full screen width. <code>min-h-[60px]</code> on transaction rows.
Effort	S

7.6 Documentation

UX-029 (carried) · Screenshots predate every fix

Low Documentation · Round 1: Low → not fixed

Where	<code>docs/screenshots/*.png</code> (23 files, last commit 1f25750, 2026-10-05)
--------------	---

What's wrong	The README and any store or OAuth review still show the old tab bar, the chip-wall task sheet, unsigned coral expenses, the light-mode mint hero at 2.21:1, and the shortcut tiles above safe-to-spend. None of the 75 fix commits touched the screenshots.
Recommendation	Re-shoot on a device with Play services after the fixes in this report. Add "UI change → refresh screenshots" to the PR checklist.
Effort	S

8. Top 10 quick wins

#	Change	Fixes	Effort
1	Snackbar: use <code>getRecommendedTimeoutMillis</code> , keep it while a screen reader is on, and say "Undo available"	UX-032	S
2	Widget: swap its light palette for <code>mintText</code> / <code>coralText</code> / <code>skyText</code> / <code>muted</code> from <code>palette.ts</code> and add it to the contrast test	UX-031 (part)	S
3	Move Sign out / Delete account to the bottom of Settings, and put "Export first" in the delete step	UX-034	S
4	Default <code>iconColor</code> to muted in menus; grape only for habits; flag glyph instead of coral for priority	UX-007	S
5	Weekly review: <code>streakText</code> / <code>bestText</code> , and hide "0 of 3"	UX-026	S
6	"Was due Mon 5 Oct" instead of "Overdue" on bills	UX-037	S
7	Unchecked checkbox rings in <code>line-strong</code> ; calendar bars in <code>coral-text</code>	UX-035	S
8	<code>radiogroup</code> / <code>radio + checked</code> in Segmented, swatches and single-choice chips	UX-036	S
9	Throw <code>ApiError</code> from sign-in and delete; "1 day left"; no "server" on Today	UX-038	S
10	Confirm "New chat" when drafts are pending; <code>min-h-12</code> on week-planner headers	UX-039, UX-040	S

9. Three bigger redesign suggestions

R1. A widget built from the app's tokens (UX-031, UX-041, UX-033)

Generate the widget's colours from `themedPalette()` at sync time and store them in the widget cache with the numerals choice. That way the widget can never drift from the tested tokens and follows the accent theme. Lay it out at two heights. Compact: safe-to-spend (hero, mint-text) and "Next: ...". Tall: the same, plus a row of 48 dp actions. Make quick-log a two-step tap ("Cha Ƃ20" turns into "Log Ƃ20?" for 3 s) or follow it with an Undo status.

R2. One "reversible write" pattern for money (UX-033, UX-032, UX-034)

The app already has the parts: ids made on the phone, an outbox that sends in order, and bulk-move replies with a `before` state. Standardise them. Every money write from a one-tap control (bill Paid/Received, widget quick-log, quick-add, AI draft Save) returns enough to reverse it. The client always shows the same snackbar with Undo, held open for screen-reader users. Keep one irreversible flow, account deletion, and give it real friction: its own page, export inline, and typed confirmation.

R3. Finish the design system's last mile (UX-007, UX-013, UX-036, UX-040)

Turn the DESIGN.md rules into code that is hard to misuse. `ListRow` and `ShortcutRow` default to muted icons and take a `domain` ("time" | "money-in" | "money-out" | "habit") instead of a raw colour. A `ChoiceField` wraps `PickerField` for single choice, with `radiogroup` semantics, and replaces the remaining chip rows. A Biome rule or unit test flags `Pressable` without `min-h-12` / `h-12` / `hitSlop`.

10. Strengths (keep these)

- **Tested, documented colour system.** Two tiers per semantic colour, `line-strong` for boundaries, `mango-inverse` for the snackbar. `DESIGN.md`, `palette.ts` and `global.css` agree exactly, and `test/contrast.test.ts` checks text, tints, fills, boundaries and both accent themes. Every in-app text pair now passes AA (Appendix A).
- **Data safety around sessions.** Sign-out asks first, counts unsynced changes and offers "Try syncing". A 401 keeps the outbox, and the login screen names the account and the waiting changes (`app/login.tsx:100-106`). A different account wipes the phone first.
- **Undo that names what happened:** "Saved: Expense ₹250 · Food · Cash", "Moved "Call bank", "Read" and 2 more to today", "Reset Drink water", "Done: "...". Habit over-tap protection and "Take one back".
- **AI money changes are proposals.** Draft cards show a signed amount, account, category and date, and nothing is written until Save. Deletions need an explicit Delete, and every applied change has an Undo row.
- **Screen-reader work done properly.** The safe-to-spend label carries the numbers. Swipe actions are claimed by the row's focusable element (`useSwipeRowA11y`). Planner cards offer "Schedule for..." actions. TextField labels are linked, errors use live regions, and the focus timer speaks at milestones only. Most of these have a pure, tested helper (`ally-actions.test.ts` , `safe-to-spend-label.test.ts` , `focus-announcement.test.ts`).
- **Calm, central error copy** in `lib/error-copy.ts` , with codes mapped to plain sentences and the dev host shown only in `__DEV__` .
- **Localisation.** Lakh grouping by default, Bangla digits and "টাকা" accepted in every parser, and an optional Bangla display for amounts.
- **Font scaling plan.** Scaling stays on. Only the hero, tab labels, calendar numbers, keypad, focus clock and emoji circles are capped at 1.3×, and containers use `min-h` .
- **Reduce motion** is respected in count-ups, confetti, Tiki, skeletons, the plant and the thinking dots.

11. Action plan

Order	ID	Title	Severity	Effort
1	UX-031	Widget: AA colours, 13 px floor, 48 dp actions, numerals	High	M
2	UX-032	Snackbar honours the accessibility timeout and announces Undo	Medium	S
3	UX-034	Delete account: move it, export inline, stronger confirm	Medium	S
4	UX-007	Grape for habits only; muted menu icons; no coral for priority	Medium	S
5	UX-033	Undo for Paid/Received, widget quick-log and drag moves	Medium	M
6	UX-013	Pickers instead of chip rows in the remaining sheets and settings pages	Medium	M
7	UX-035	Non-text marks ≥ 3:1	Low	S
8	UX-036	Radio semantics for single-choice controls	Low	S
9	UX-026	Weekly review without zeros	Low	S
10	UX-037	"Was due" instead of "Overdue"	Low	S

Order	ID	Title	Severity	Effort
11	UX-038	Sign-in/delete errors through error-copy; plurals	Low	S
12	UX-039	Confirm or undo "New chat"	Low	S
13	UX-040	Week-planner header, calendar cells, 60 dp rows	Low	S
14	UX-041	Numbers setting in keypad and widget	Low	S
15	UX-011	Centre the FAB or accept it explicitly	Low	M
16	UX-029	Re-shoot screenshots after the fixes	Low	S

16 open findings. Order is impact over effort. UX-031 comes first because it is the only High and covers two commitments.

Appendix A. WCAG contrast ratios (computed)

Method: WCAG 2.x relative luminance, $(L1 + 0.05) / (L2 + 0.05)$, computed by script from `theme/palette.ts` (checked equal to `global.css` and to the DESIGN.md table: 0 mismatches) and from the widget's own palette. Thresholds: 4.5 for text, 3.0 for large text (≥ 24 px, or ≥ 18.66 px bold) and for UI components or graphics that are the only cue. Translucent fills are flattened onto the surface below. "n/a" marks hairlines and fills where 1.4.11 does not apply, because the control is identified by its text.

* 2.999 before rounding, so it fails 3:1.

Summary: every in-app text pair passes in light, dark and both accent themes (lowest: dark sky-text on its own 15% tint, 4.92). Below threshold: light-mode marks when they are the only cue (UX-035) and the widget's light palette (UX-031). Dark mode passes everywhere.

Appendix B. Accessibility and touch-target scan

Check (grep / parse over apps/mobile/src)	Round 1	Round 2	Note
<Pressable> tags	60 (40 files)	63 (40 files) + 7 SwipeRowPressable	
Pressables without a role	18	4	shutdown-flow.tsx:117,138,168,189: accessible={false} rows; the inner Checkbox is the control, by design
accessibilityRole	57	76	
accessibilityLabel	53	76	
accessibilityHint	10	14	
accessibilityLiveRegion	5	7	
allyActionProps / accessibilityActions	1	12	swipe rows, cards, list rows, planner cards, habit rings
hitSlop	12	12	
maxFontSizeMultiplier	0	11	hero, tab label, keypad, calendar, focus clock, emoji circles, badge
adjustsFontSizeToFit	1	4	
allowFontScaling={false}	0	0	scaling never disabled
useReducedMotion (components)	6	6	amount, confetti, tiki, skeleton, plant, thinking indicator
AccessibilityInfo.getRecommendedTimeoutMillis	0	0	UX-032
Off-scale text	9 px ×2, 11 px ×2	12 px tab label only	allowed by DESIGN.md; widget still 10/11/12 px (UX-031)
Hard-coded hex outside the palette	widget 37, tiki 12, area-sheet 6, habit-sheet 6, ...	widget 37, tiki 10, area-colors 7, confetti 5, plant 5, google-logo 4, error-screen 1, habit-sheet 1	area-colors are named swatches; habit-sheet is the stored default

Targets below 48 dp after this round

Location	Size (dp)	Status
All 10 round-1 sites (routine runner, shopping remove, segmented, chat Keep/Delete, area swatch, subscriptions, compact task, Logbook link, shutdown rows)	≥ 48	Fixed
components/ui/snackbar.tsx:46 action	40 + 12 slop = 64	OK

Location	Size (dp)	Status
features/assistant/message-bubble.tsx:93 steps fold	32 + 8 slop = 48	OK
components/ui/chip.tsx:29	40 + 4 slop = 48	OK
features/plan/week-planner.tsx:127 day header	~24 tall, no slop	UX- 040
money-calendar.tsx:265, calendar-view.tsx:136 cells	~43 wide on 360 dp	UX- 040
Widget action pills / quick-log chips	36 / ~28	UX- 031

Appendix C. Requirement checklist (UX-relevant)

Requirement (source)	Round 1	Round 2	Ref
Log anything in under 5 s (PRODUCT, spec)	Met by design	Met by design; Undo after save	\$5
Quick-add: one field, one Save, preview first (spec)	Met	Met (pickers replace chips)	<code>quick-add-sheet.tsx</code>
Today order: greeting → safe-to-spend → top three → timeline → habits → timer → evening (spec)	Partial	Met (Next line in header; shortcuts last)	<code>(tabs)/index.tsx:55-72</code>
Tab bar per DESIGN.md	Partial	Met as amended; FAB off-centre with chat	UX-011
Targets ≥ 48 dp (PRODUCT, spec)	Partial (10 sites)	Mostly (planner header, calendar width, widget)	UX-040, UX-031
WCAG AA in light and dark (PRODUCT)	Dark only	Met in app, tested; widget light fails	App. A, UX-031
Dark text on mango and every fill (PRODUCT, DESIGN)	Mango only	Met	<code>text.tsx:27</code> , <code>swipe-row.tsx:45-51</code>
Colour never the only signal; amounts carry a sign (PRODUCT)	Not met	Met (−/+ and transfer icon); calendar bar is a supplementary mark	<code>transaction-amount.ts</code>
Colour means something (PRODUCT, DESIGN)	Not met	Partial	UX-007
Reduce-motion respected	Met	Met	App. B
Tabular digits for amounts and timers	Met	Met	<code>text.tsx:63</code>
Delete → Undo snackbar, not a dialog (spec)	Met (contrast issue)	Met; time limit not adjustable	UX-032
Pickers in sheets instead of chip rows (DESIGN)	Not met	Partial (task, quick-add, transaction done)	UX-013
Caption 13 is the smallest text, except tab labels 12 (DESIGN)	Not met	Met in app; widget below	UX-031
Containers use min height; chrome capped at 1.3× (DESIGN)	—	Met in code Unverified at 200%	App. B
Rows ≥ 60 dp (DESIGN)	Mostly	Mostly (transaction rows 56)	UX-040
Guilt-free UI (PRODUCT)	Mostly	Mostly (weekly review zeros, "Overdue" bills)	UX-026, UX-037
Bangla and English input (README)	Partial	Met; Bangla display for amounts	UX-041
Offline: changes queue up, then sync (README)	At risk on sign-out	Met (confirm, 401 keeps outbox)	UX-001 fixed
